

Post Implementation Evaluation Report

America's Job Link Systems Enhancements – Labor

Project Dates: 10/2002 through 9/2005

Project Cost: \$2,398,800

Project Objectives

America's Job Link (AJL) is a web-based One-Stop self-service job matching and case management system to deliver workforce development services. America's Job Link is an outgrowth of the Kansas Job Link System. This project undertook the enhancement of the existing system to provide additional programmatic linkages to other Department of Labor funded programs. This project presented AJLA-TS with the opportunity to implement a viable system development life cycle, with increased emphasis on process standardization for assignment, effort reporting, approvals, requirements development and documentation, test planning and testing, and validation.
